A PERSONAL STYLIST FOR THE CLOTHES YOU ALREADY OWN

Cinch *the field guide*

THE DIRECTION

Cinch is treated as a print lookbook that regenerates every morning — considered, quiet, confident. Not a dashboard, not a feed, not a shop. It only ever styles clothes you already own, and it never oversells.

The data is the point but kept editorial: cost-per-wear, colour harmony, and real usage read like a caption or a spec line under a photograph, never like fine print. Garment photos are styled placeholders — drop the real shots in later.

THE SYSTEM

Instrument Serif — DISPLAY

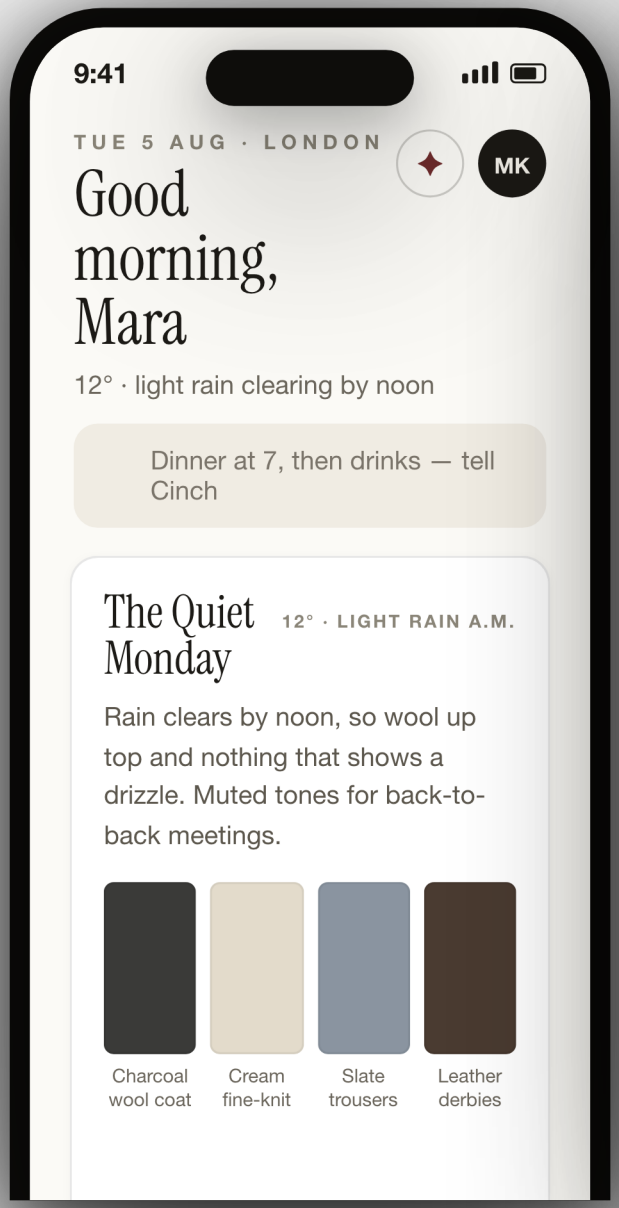

Helvetica Neue · data & UI — TEXT

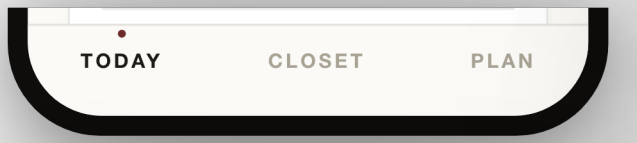

01 Welcome & sign-in — the whole promise in one screen; shows a sample outfit rather than describing one.

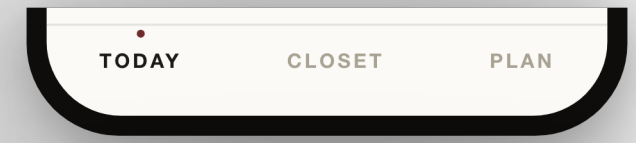

02 Today — the home screen. Complete outfits for the day, the facts behind each, and its harder states. Love / not-for-me / I-wore-this are live.

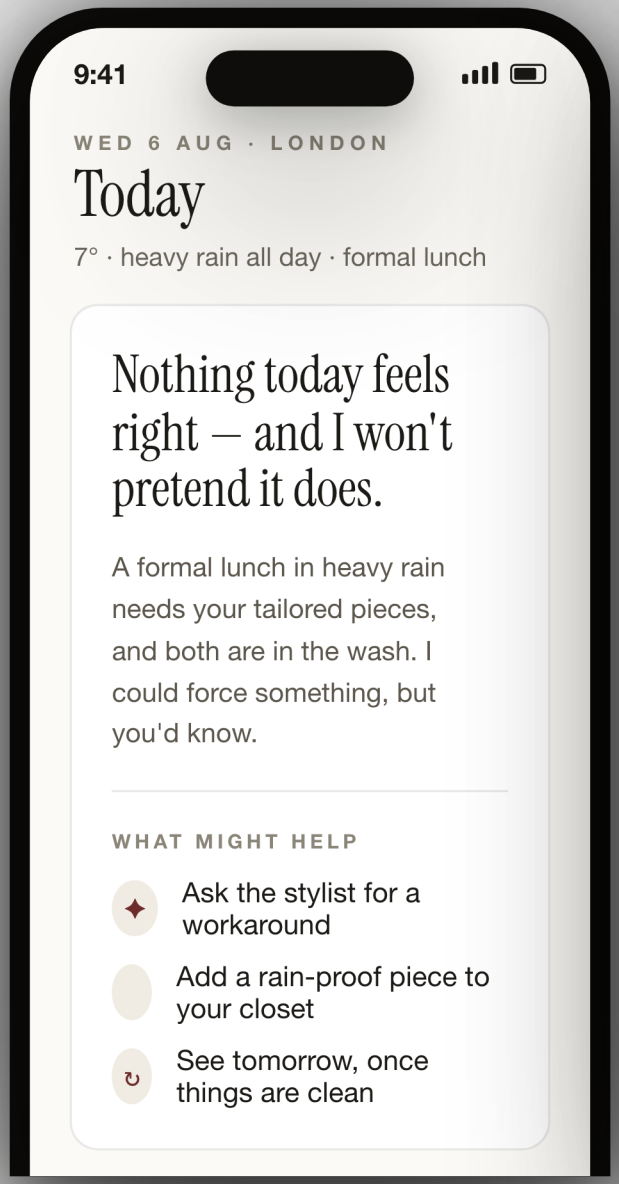

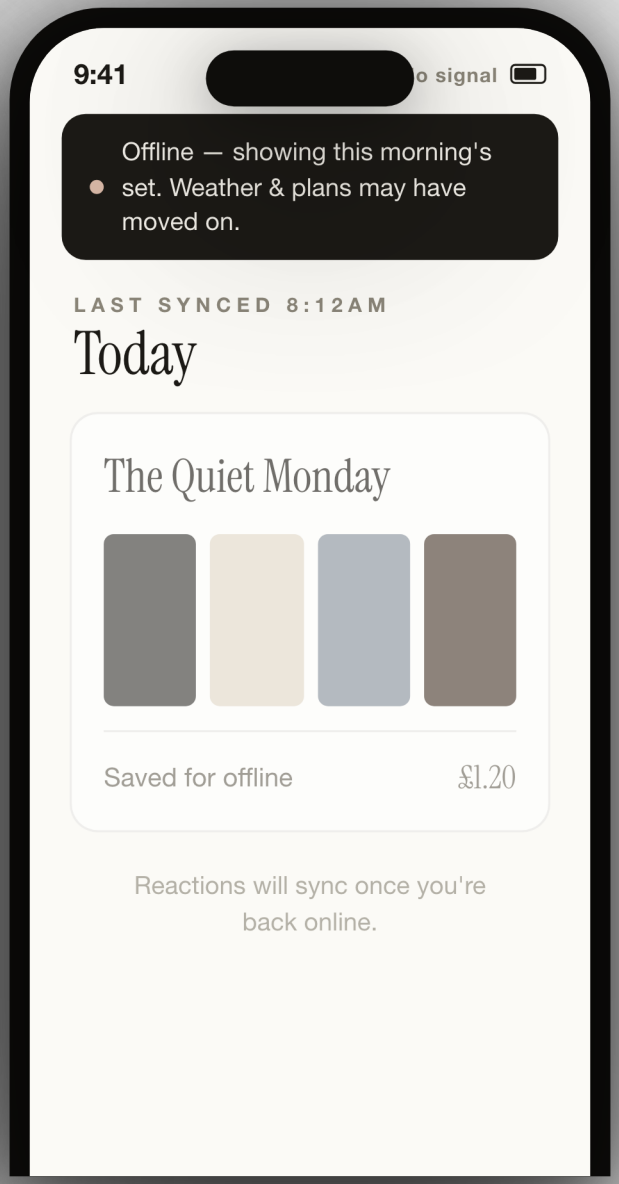

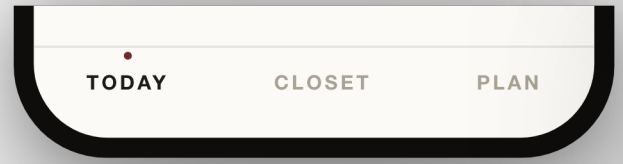

02a *A normal day* · try the buttons

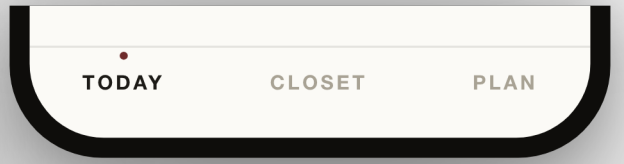

02b *New user · empty closet*

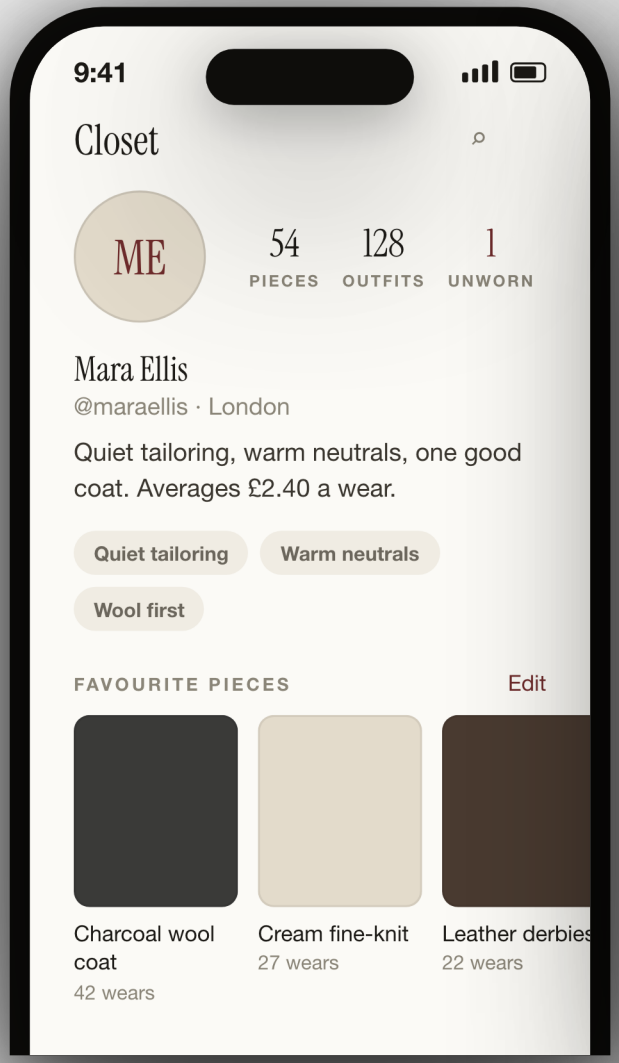

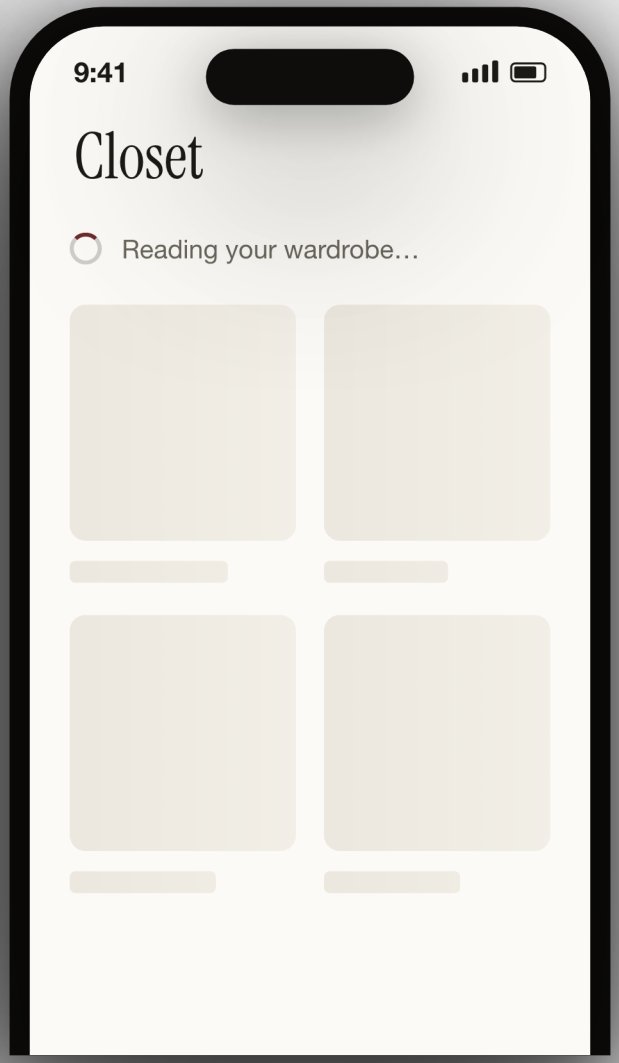

02c *When nothing works · honest*

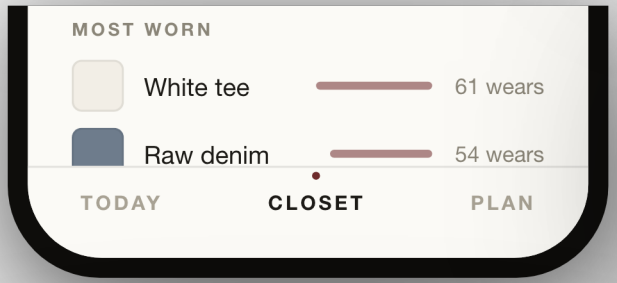

02d *Offline*

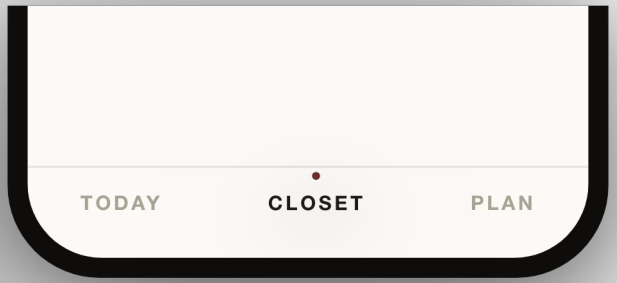

03 Closet — your wardrobe as a profile: who you dress like, your favourites and most worn, then everything you own. The chips filter live.

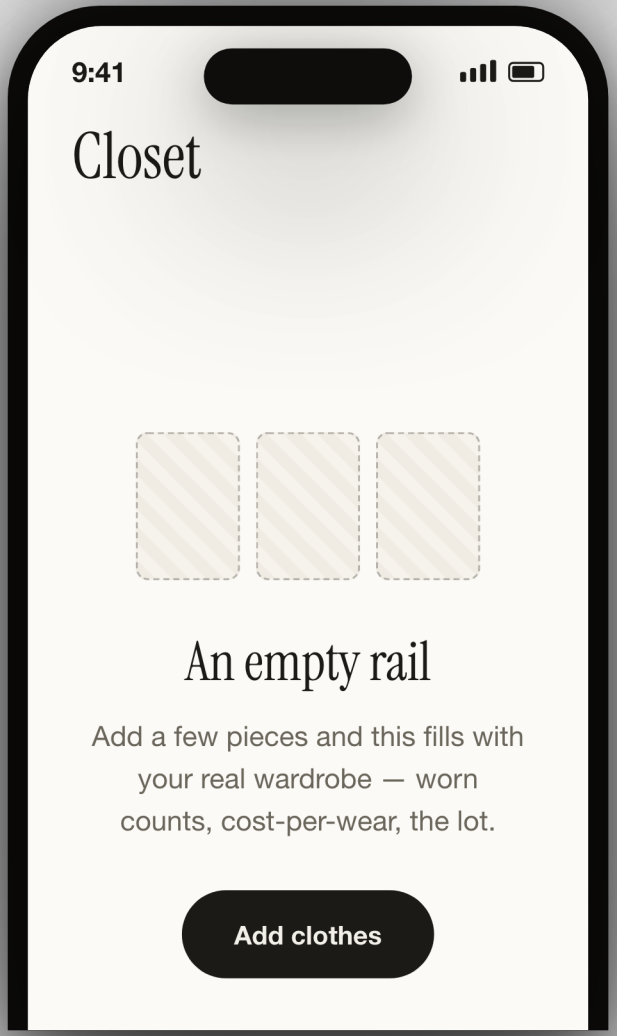

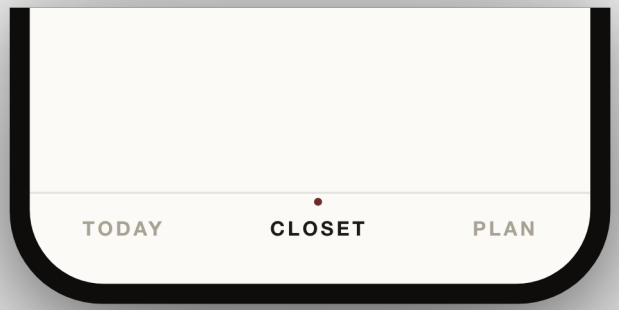

03a *Populated* · tap the categories

03b *Loading*

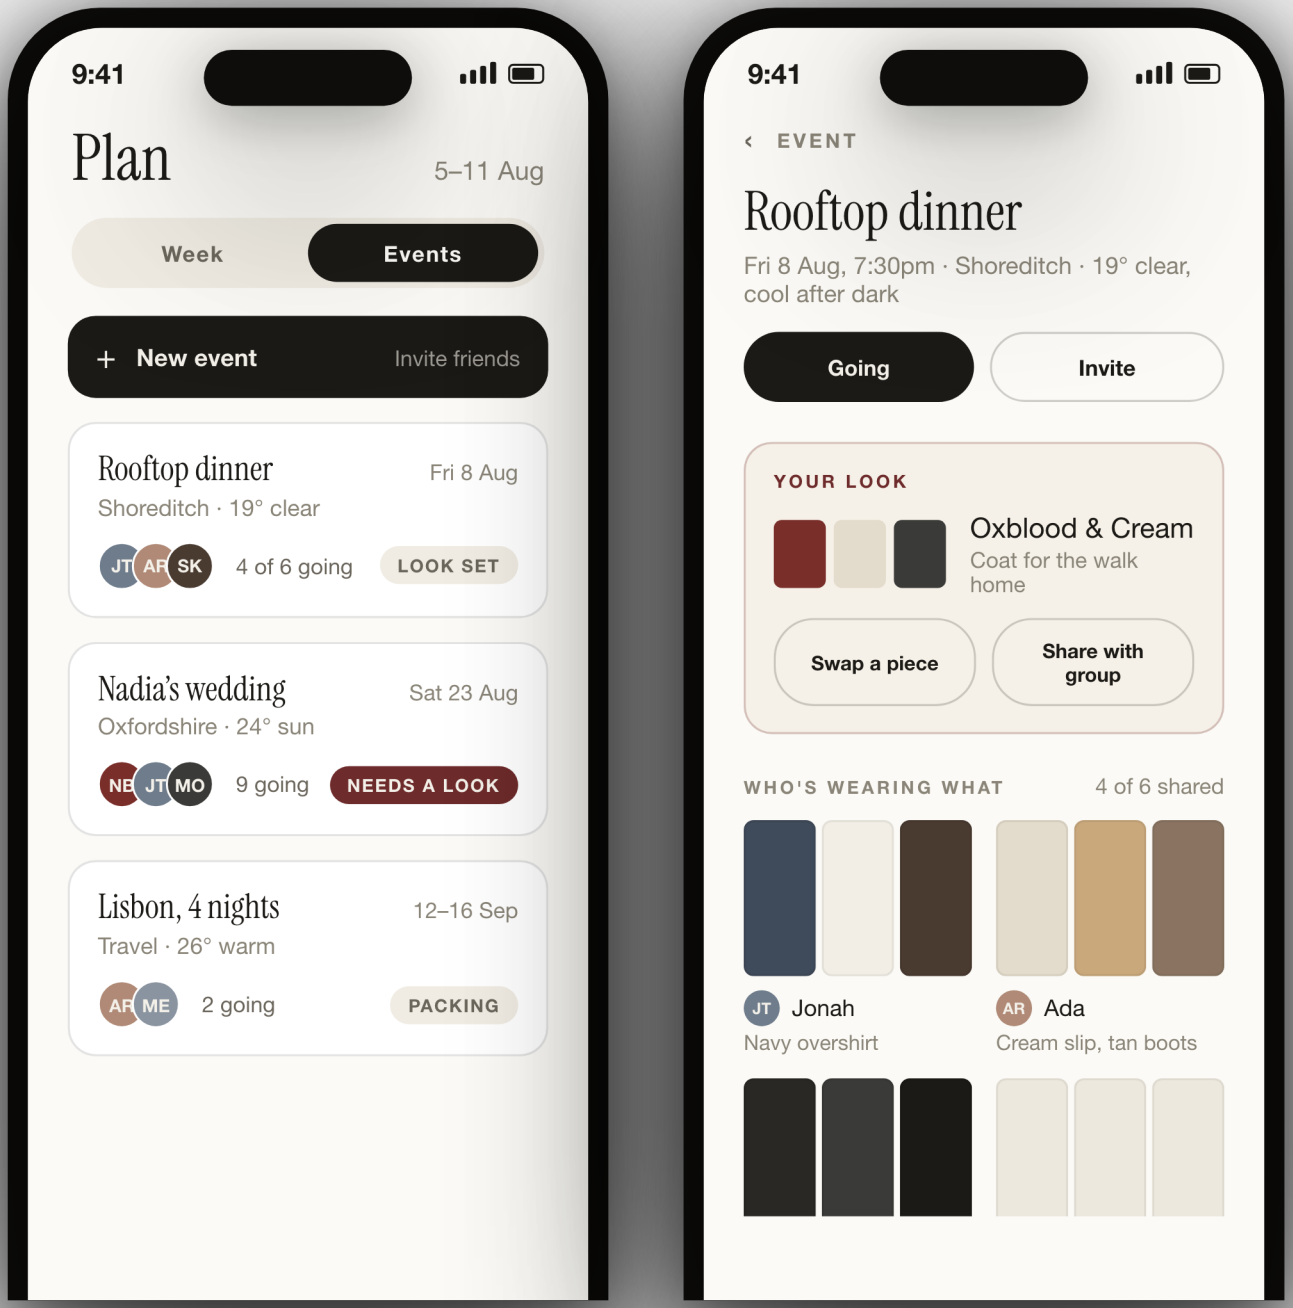

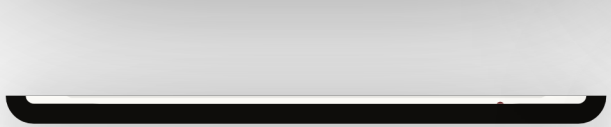

03c *Empty*

04 Item detail — one garment and its story: what it cost, how hard it's working, where it suits you.

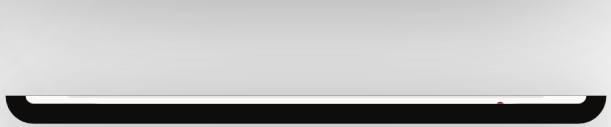

05 Plan — the week ahead plus the things you're dressing for. Create an event, invite friends, and see what everyone's wearing before you go. The Week / Events toggle works.

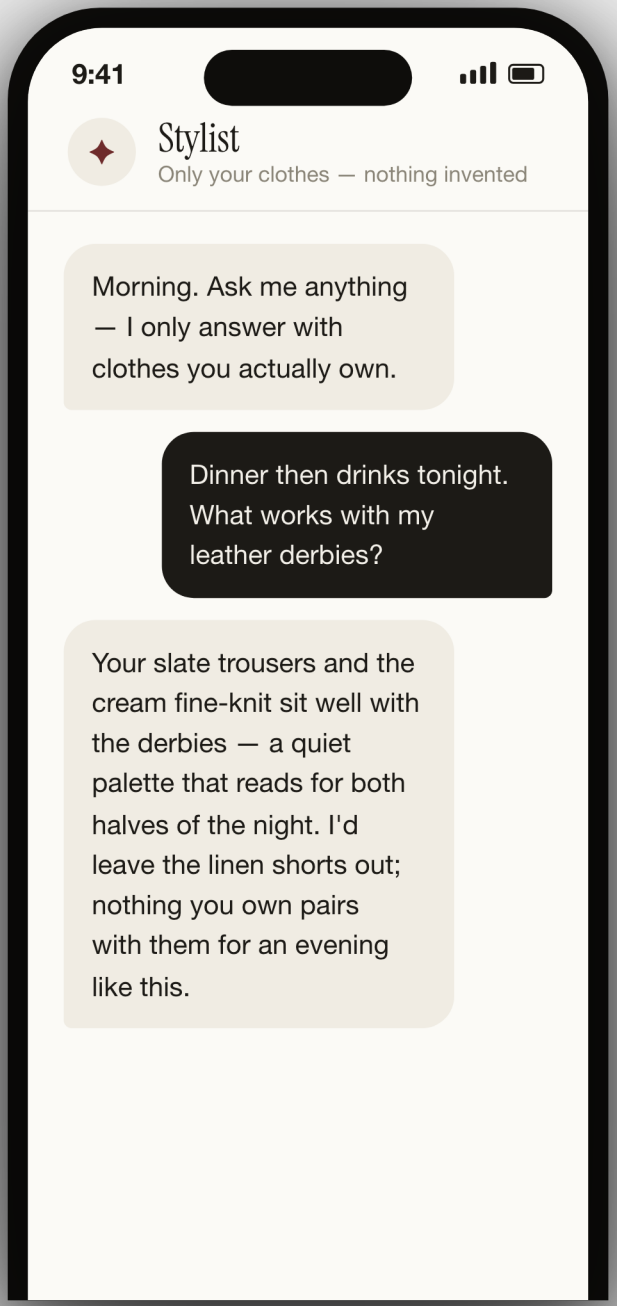

05a *Week & events* · tap the toggle

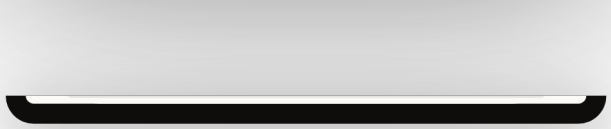

05b *Event detail*

06 Stylist

— ask it anything. It answers only with clothes you own, and says so plainly when you don't have the right piece. The input works — type and send.

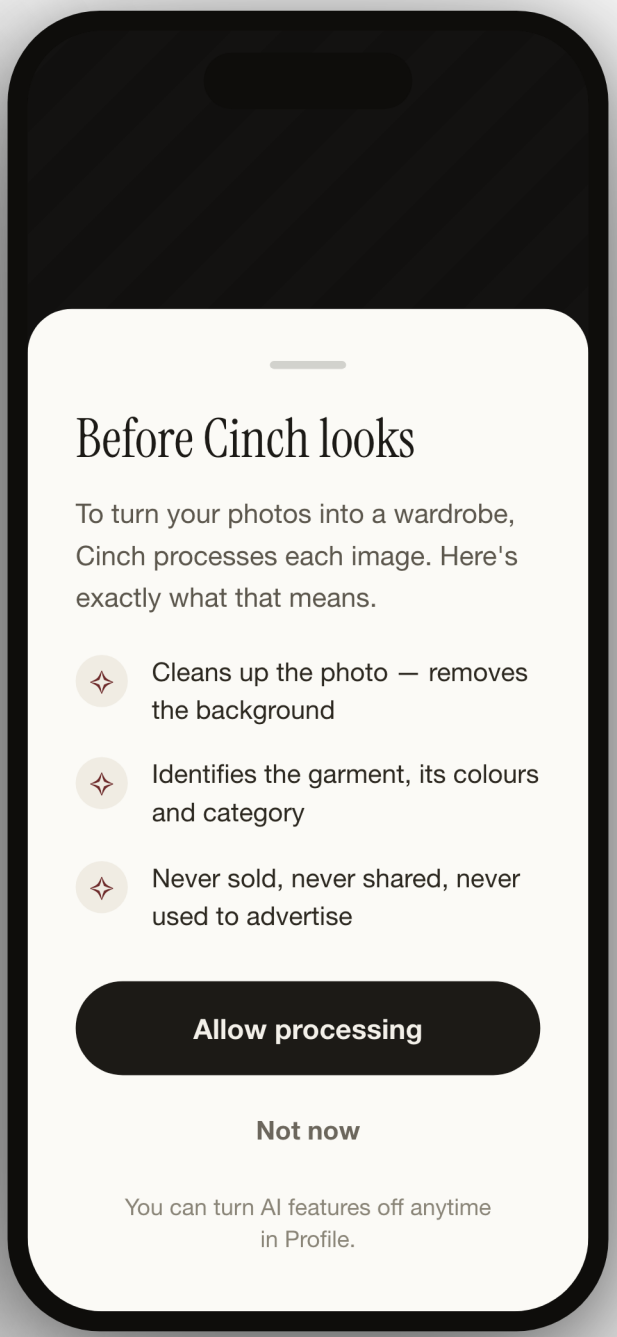

06 *Ask it anything* · type & send

07 Capture — photograph the wardrobe. Clear progress as Cinch cleans up and identifies each shot, plus the first-run consent moment.

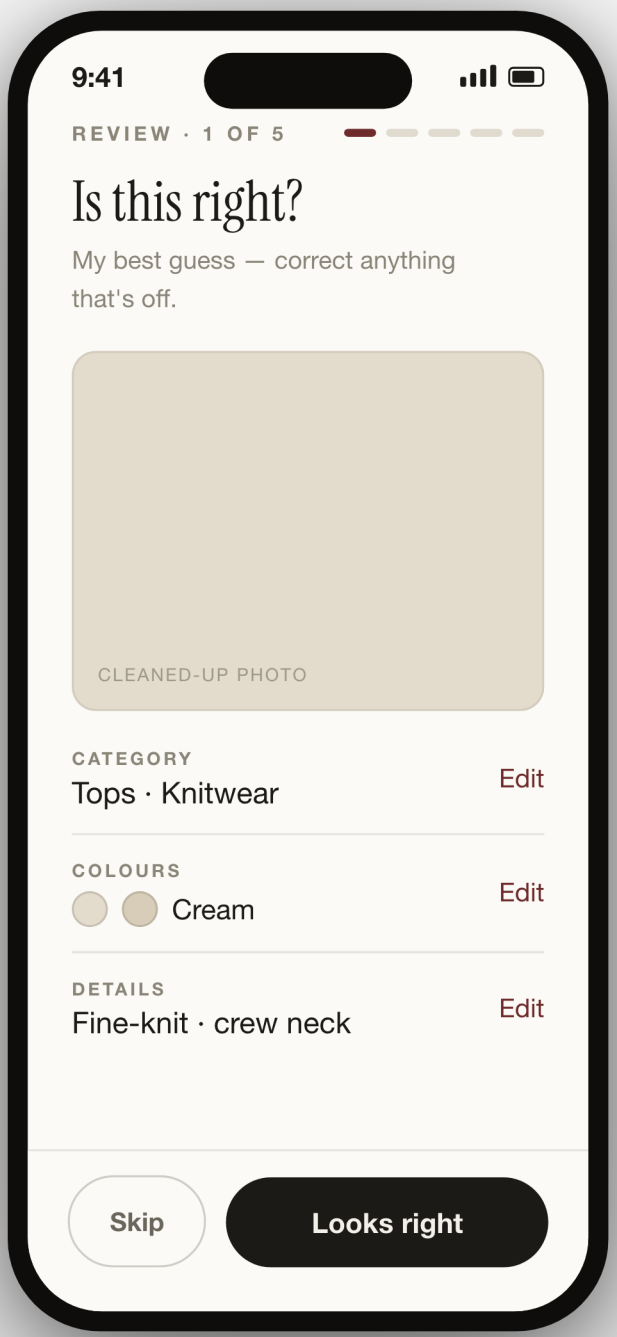

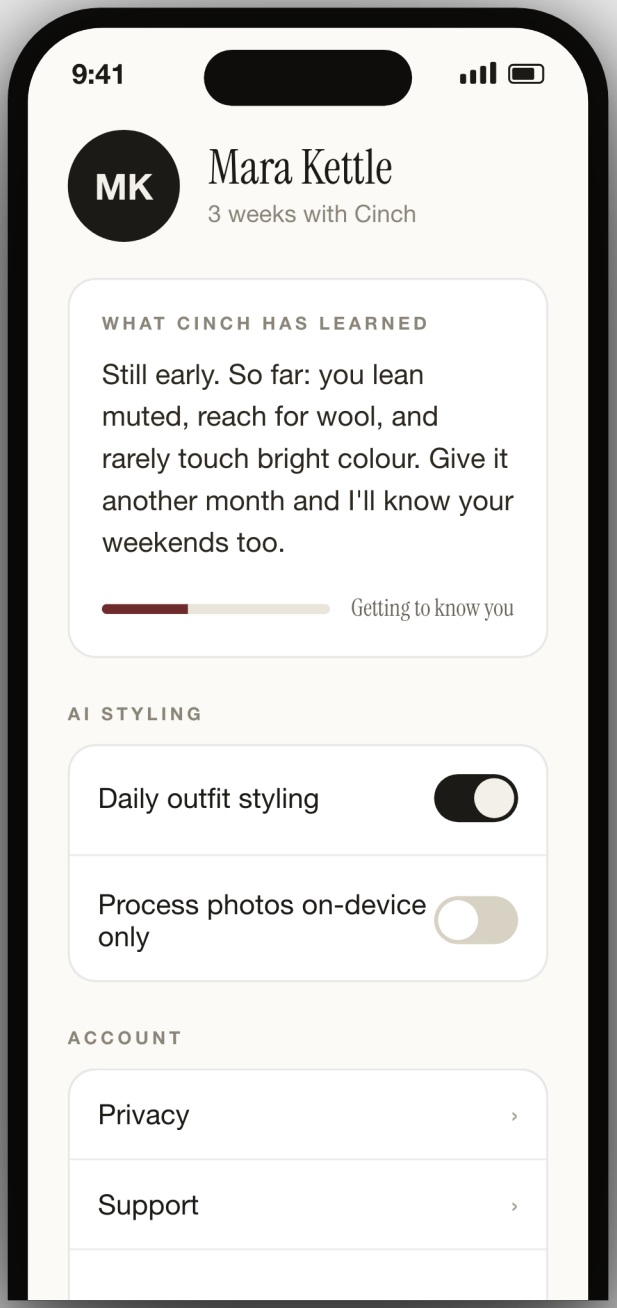

07a *Capturing & processing*

07b *First-run consent*

08 Review — confirm what Cinch identified, one item at a time. A clear way to accept, a clear way to skip.

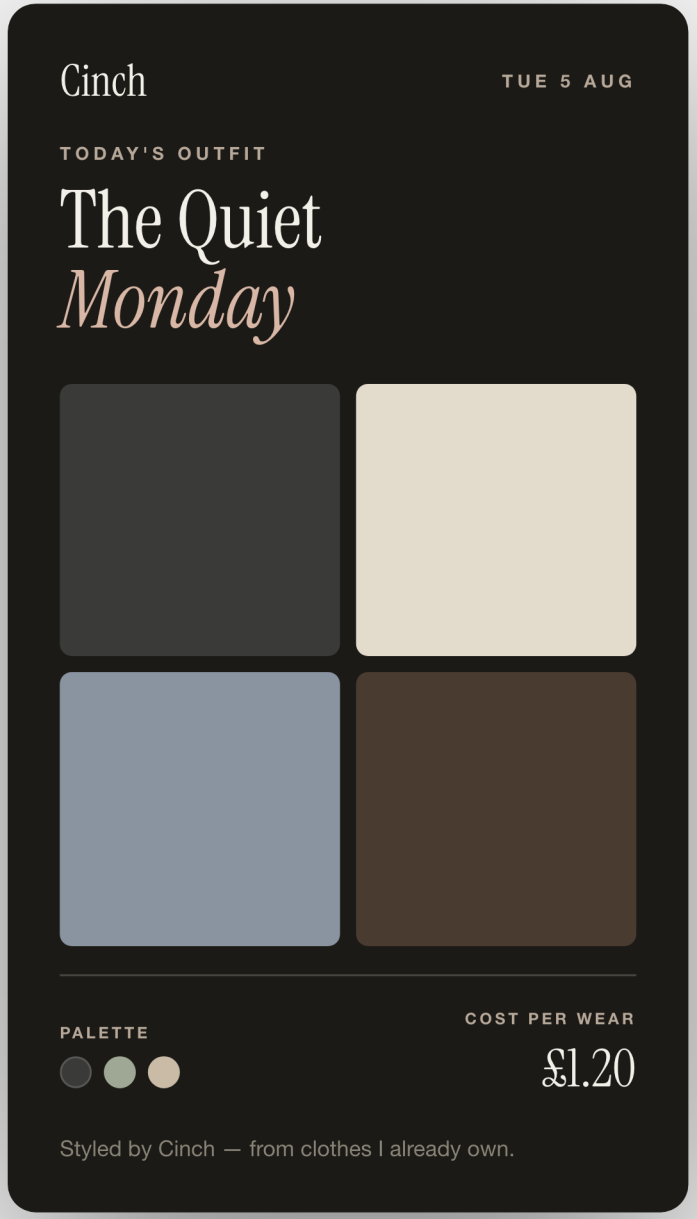

09 Profile — your style summary, full control over the AI (including off), and the usual account bits. Honest about how little it may still know.

10 The shareable outfit

Any outfit exports as one tall frame for Instagram — the look, its name, and the data behind it. The app's best advertisement, so it's the most composed thing here.

ON EXPORT YOU CAN

- Share to Instagram Stories
- Save image to camera roll
- Toggle the data on or off

The frame keeps the cost-per-wear and palette by default — the numbers are the point, even when you're showing off.
